

SMARTair™

Gives Kenyan Hotel 24/7 Access Control

SMARTair™
Your Access. Your Control.

The Challenge

The Creadex Hotel in Migori County, Kenya is located along the Kisii-Isibania Road, which serves as a connecting point to the Masai Mara National Park. While the hotel provides a range of services, management is not present on a daily basis and runs the hotel remotely on those days. As a result, the hotel wanted an access control solution that would ensure the security of guests, allow for remote management of access, in addition to being able to generate audit reports.

The Solution

SMARTAir™ Guest uniquely addressed Creadex's needs and more. As a cost effective access control system, that is easy to install and provides many operational and security benefits, it is ideal for small hotels, guesthouses and hostels. Replacing room keys with a robust smartcard based wireless access control system makes sound business sense – in particular for Creadex with management being off site several days a week. While their guests enjoy the convenience, flexibility and security of the card-based access, Creadex benefits from cost and time savings through more streamlined and efficient administration. In addition, SMARTAir's ability to provide accurate audit trails of who went where and when, onsite staff is more accountable, while management has more insight into daily activities at the hotel.

The Result

With SMARTAir, management was able to continue operating the hotel without being present at all times. They were able to improve both control of access, security and operations. SMARTAir's ease of installation and use is especially advantageous in the hospitality industry where disruption of any kind can be problematic.
