eCLIQ System: The key to electronic locking

More durable, more secure and more efficient than conventional locking systems
Changing organisational structures, the rapid growth in team and project work, and the rise in mobile working are putting enormous pressure on building infrastructure and those responsible for security technology. Designed with this in mind, eCLIQ is the best choice for a more secure future.

Our certified CLIQ® specialist resellers will help with your individual needs analysis, locking plan development, system definition and selection. We offer convenient software packages for planning and later management of an eCLIQ electronic locking system designed to match your current business needs and respond to future requirements.

Questions you need to answer before the planning stage:
- How is your building used?
- What is your organisational structure?
- How strict are your security requirements?
- What other requirements do you have?
- Are frequent changes expected?

eCLIQ is a system of programmable keys and compact, secure locking cylinders, offering you:
- Minimize the risks associated with lost keys
- Flexibility to manage constantly changing access requirements
- Enhanced security with CLIQ® chip generation using AES encryption
- Durability due to robust hardware
- Easy installation – no wiring required
- Clear audit trails

The electronic advantage: high security

A completely electronic locking system, eCLIQ is based on the mechanical precision and microelectronic modules of ASSA ABLOY’s CLIQ® technology. Secure, reliable and uncomplicated, the powerful microelectronics in the programmable waterproof key and compact electronic locking cylinder together provide the highest possible security. The eCLIQ system is generally suitable for the design of locking systems for all types of properties.

Durable cylinders and keys, plus powerful microelectronics

Secure and safe, the powerful microelectronics in the programmable waterproof key and compact cylinder together provide the strongest possible security. The latest chip generation delivers a high degree of encryption, providing enhanced protection. Updates and changes of access rights can be transferred to the user keys via wall mounted or mobile programmers.

Flexible access control

eCLIQ offers a cost-effective and easy way to assign new access rights, no matter how many times your needs change. Locking cylinders can be individually programmed with time-limited access, using the programmer and the red programming key, so temporary rights for contractors and external service providers can be assigned quickly and easily. Lost keys no longer pose a security risk, as keys can be revoked electronically at any time.
About Mul-T-Lock

For more than 4 decades, Mul-T-Lock® has been designing, manufacturing, marketing and distributing innovative high security locking solutions to people, places and organizations globally. Adhering to the world’s most stringent standards, Mul-T-Lock® High Security solutions are at work on every continent, in nearly 70 countries, and securing over 100 million users. Using advanced and patented technologies, Mul-T-Lock® stays a step ahead of the market by anticipating customers’ security and operational needs. As a member of the ASSA ABLOY Group, and with availability through over 20,000 authorized and trained service centers, customers rely on Mul-T-Lock® to provide proven, proactive and protective High Security locking platforms.
